"Choose a **faster** model when speed matters  
and a **smarter** one for more complex tasks"

# LoopSync Atlas

## Overview

LoopSync Atlas is a cloud-based intelligent framework that helps you see, understand, and reason across anything online. From complex calculations to intricate code, it simplifies your workflow by capturing content from any webpage — even restricted or non-copyable elements — and analyzing it using 8 advanced AI models. With features like browser-based capture, stealth mode for private selection, multi-model AI analysis, and live response streaming across desktop and mobile, LoopSync Atlas is perfect for students, developers, researchers, analysts, and professionals.

Module 1

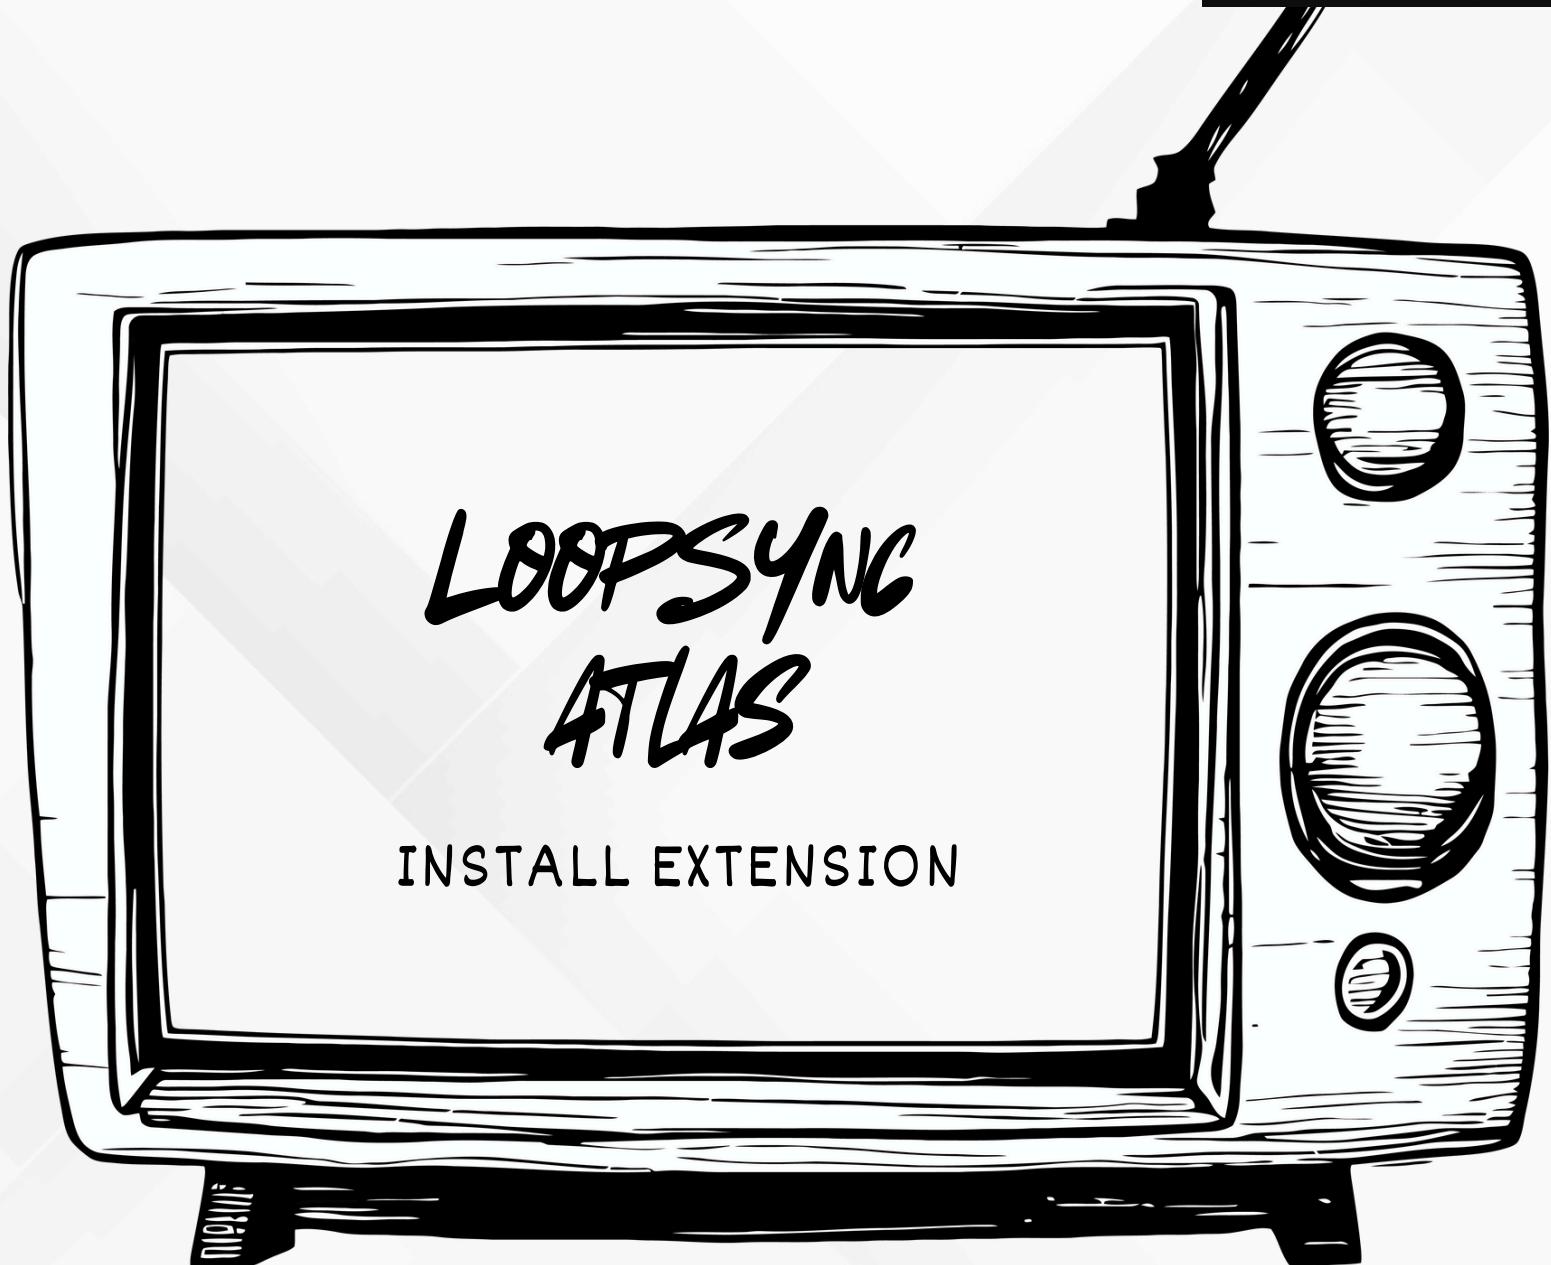

# Installing & Setting Up

## Browser Extension

- Go to the **LoopSync Atlas console**, click **Add to Browser**, and follow the prompts.
- Open the extension, click **Verify Console**, enter your email and password, and verify your email.

## Sync Across Devices

All captures and responses sync automatically, with live response viewing on mobile.

Module 2

# Capturing Content

## Drag-Select Capture

- Click the LoopSync Atlas icon and drag over the area to capture text, images, code, graphs, dashboards, or restricted content. Release to finalize.
- Enable Stealth Mode to capture discreetly—no visible selection box, perfect for sensitive info.
- Captured content is instantly sent to the cloud and analyzed by 8 AI models simultaneously.

# Viewing & Interpreting Response

- Responses appear in the LoopSync Atlas UI immediately after processing.
- Multi-model results are presented side-by-side for comparison.
- Mathematical Calculations: Step-by-step solutions and visualizations.
- Code Assistance: Debugging, optimization, explanation, and language conversion.
- Web Content Interpretation: Summaries, translations, key-point extraction, and insight.

One step at a  
time. You'll get  
there.
